TRUEPOWER

POWER SUPPLIES

The Worldwide Leader in Silence and Performance.

TruePower from Antec is the most advanced line of PC power supplies from the company that has led the way in power supply design and quality since 1986. These power supplies feature dedicated output circuitry for each voltage so that each output delivers maximum power whenever you need it. To make sure these voltages stay accurate, TruePower also includes voltage feedback circuitry to improve system stability

Thanks to Antec New Low Noise Technology, system noise is substantially reduced, too. The power supply fans run at the lowest speed appropriate to load and conditions, controlled by an advanced temperature response system that outperforms previous solutions. Dedicated Fan Only power connectors allow TruePower power supplies to control the speed of case fans, too, thus reducing total system noise.

Antec Low Noise Technology

Special Features:

- Dedicated output circuitry for each voltage output, overcomes the limitations of traditional combined output design. Get all the power you need when you need it most.
- Voltage Feedback to maintain accurate voltage to all components: adds stability to your system.
- Antec Low Noise Technology achieves the optimum balance between noise reduction and necessary cooling.
- ATX12V (except True550EPS12V) for AMD™ and Intel® systems including P4.
- Two double ball bearing fans.
- Gold plated connectors.
- AQ3 - Antec Quality 3-year parts & labor warranty

Special Models:

- TrueBlue 480 - True480 power supply with Blue LED internal Illumination.
- True550EPS12V - designed for compatibility with motherboards designed to the Server System Infrastructure (SSI) specification. (Not ATX12V)
